

Configuring Valimail for Single Sign-On

Configuring Valimail for SSO enables administrators to manage their users using NetScaler. Users can securely log on to Valimail using their enterprise credentials.

To configure Valimail for SSO through SAML, follow the steps below:

1. In a browser, type the URL, <https://app.valimail.com/> and press **Enter**.
2. You need to contact the Valimail support team.
3. You need to provide the IDP metadata to the Valimail support team.

The Valimail support team configures SSO settings and provides you ACS URL and SP-initiated URL.
