

Configuring Spoke

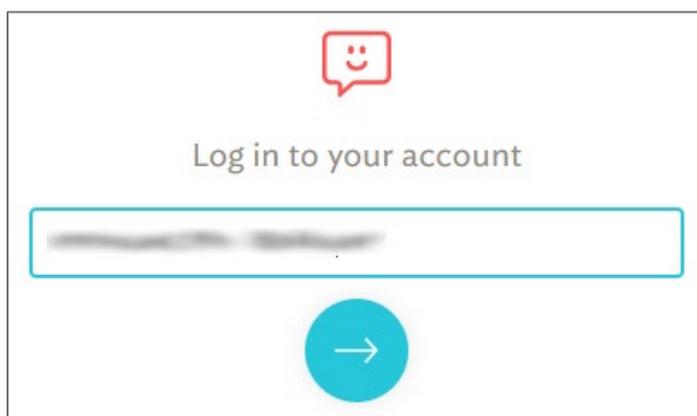

Configuring Spoke for single sign-on (SSO) enables administrators to manage users of Citrix ADC. Users can securely log on to Spoke by using the enterprise credentials.

Prerequisite

Browser Requirements: Internet Explorer 11 and above

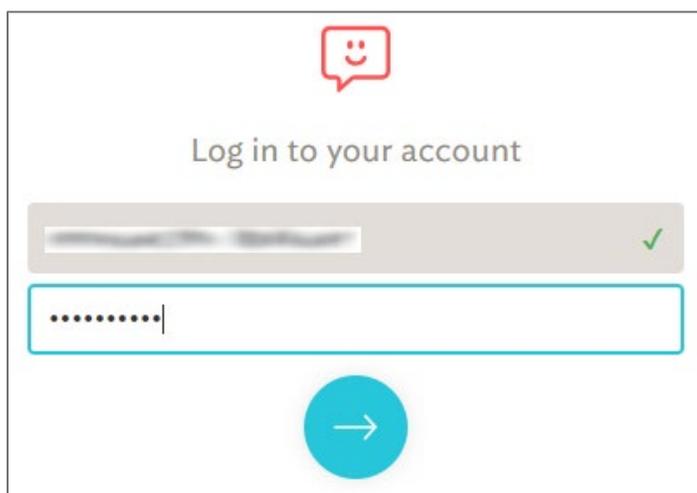

To configure Spoke for SSO by using SAML:

1. In a browser, type <https://www.askspoke.com/> and press **Enter**.
2. Type your Spoke email address and click the Next button.

The screenshot shows the Spoke login interface. At the top center is a red speech bubble icon containing a white smiley face. Below the icon, the text "Log in to your account" is displayed in a grey font. Underneath this text is a white rectangular input field with a light blue border, containing a blurred email address. Below the input field is a circular blue button with a white right-pointing arrow.

3. Type your Spoke password and click the Next button.

The screenshot shows the Spoke login interface after the email address has been entered. The top part, including the smiley face icon and the "Log in to your account" text, remains the same. The email input field now has a grey background and a green checkmark on the right side, indicating it is valid. Below the email field is a white rectangular input field with a light blue border, containing a blurred password represented by a series of dots. Below the password field is a circular blue button with a white right-pointing arrow.

4. Click **Settings** from the left panel.
