Configuring TwentyThree

Configuring TwentyThree for single sign-on (SSO) enables administrators to manage users of Citrix ADC. Users can securely log on to TwentyThree by using the enterprise credentials.

Prerequisite

Browser Requirements: Internet Explorer 11 and above

To configure TwentyThree for SSO by using SAML:

- 1. In a browser, type <u>http://www.twentythree.net/</u> and press **Enter**.
- 2. Type your TwentyThree admin account credentials (**Email address** and **Password**) and click **Log In**.

3. In the top-right corner, click the Settings icon and select Access from the drop-down list.

4. In the Access page, select the Single sign-on or Paywall option.

| 23 | (Billion) | | | | | |
|--------|---|--------|--|-----|--|------------------|
| Videos | Live | Editor | Analytics | | Audience | Social |
| Acces | iS | | | | | |
| 2. | Public website Anyone can browse your videosite and play your published videos. | | Restricted site Only people set up with a username and password to can see the videosite. Good for testing and development. | XXX | Shared password For community or event sites wh users type in a shared password access. | tere I to get |
| A: | Firewall Only users coming in from certain IP addresses can open the site and play videos. | \$ | Single sign-on or Paywall Users sign in through existing user accounts; for example from the intranet or a payment gateway. Requires <u>API integration</u> . | | | |

5. In the **Access** page, scroll down and enter the values for the following fields:

| Field Name | Description |
|-------------------|----------------|
| Remote login URL | IdP logon URL |
| Remote logout URL | IdP logout URL |

| Remote authentication | | | | | |
|--------------------------|---|--|--|--|--|
| Remote login URL | If you want to redirect un-authenticated users to login page, enter the link here. This page should be designed to log in and authenticate users through your prefered identity system – and then delegate access to this site through <u>our</u> <u>single sign-on API</u> . | | | | |
| Remote logout URL | If you want users to log out using a specific URL, enter it here. | | | | |
| Create visitor accounts? | No, SSO should only sign sessions, not create visitor accounts. Yes, SSO should create a visitor account on TwentyThree when possible. Creating visitor account can be helpful in tracking for example comments, live registrations and open uploads. | | | | |
| Allow back-end login? | No, SSO should only be used for my front-end site. Yes, SSO log users into the back-end if the person is already set up with an account. The single sign-on mechanism is designed to grant people access to published content on your video website. Optionally, you can choose to let people be logged in to the backend if a user account has already been created with their e-mail address. | | | | |
| | Save | | | | |

6. Finally, click **Save**.

Note: To configure SSO, reach out to the TwentyThree customer support and provide them with the metadata URL. The support team will configure the SP from the backend.
